what is openlp.org?

openlp.org is an open source lyrics projection application. It has been written specifically with churches in mind for displaying the words of songs and Bible verses using a computer and a data projector.

Not only can you project song words and Bible verses, but you can also project the following media:

- Images
- Videos
- PowerPoint Presentations*
- Custom Slides

Additional features include a theme system for creating display themes, and alerts for alerting the congregation to small but urgent issues (such as a car's lights being left on).

what is open source software?

Open source software is software that is open to everyone. The source code (programming instructions) is open and free for anyone to look at. By extension, this means that the software itself is also free. Not only is it free to download and use, but the user is free to make copies of it and give those copies to others. In fact, the user is encouraged to do so.

where can i get openlp.org?

You can download openlp.org by surfing to <http://www.openlp.org/en/download.html> and clicking on the link for the latest stable version of openlp.org.
